

## **DirectoryAnalyzer** - Real-Time Diagnostics and Alerting for Active Directory

NetPro's DirectoryAnalyzer manages Active Directory's infrastructure as a single entity across local and wide area links. It diagnoses all of the critical components of Active Directory in real time, including replication, Operations Masters, Active Directory DNS functions, Domain Controllers, Global Catalogs, and application partitions. DirectoryAnalyzer sets a new standard for AD health management, providing a MOM-integrated health console that features multi-forest views, tight integration with NetPro's ChangeAuditor and DirectoryTroubleshooter solutions, an expanded alert library, and instant email notification.

## **DirectoryTroubleshooter** - Automated Troubleshooting and Repair for Active Directory

NetPro's DirectoryTroubleshooter enables you to troubleshoot and repair business-crippling directory Active Directory problems fast with its automated capabilities -- before they wreak havoc on your systems and your users. And now, through full integration with NetPro's DirectoryAnalyzer, you'll have quick and easy access to automated Active Directory diagnostics, repair and reporting at the first sign of an alert.

## **DNSAnalyzer** - Proactive DNS Diagnostics and Alerting

NetPro's DNSAnalyzer alerts on more than 200 different error conditions, providing comprehensive, 24x7 coverage of DNS and Active Directory. And it will run on any flavor of DNS Server (Microsoft, BIND, QIP, etc.)

## **SecurityManager** - Active Security and Policy Management for Active Directory and File Servers

NetPro's SecurityManager ushers in a whole new breed of security for Active Directory and File Servers. Using a foundation of Microsoft Security Best Practices, SecurityManager is the only solution that empowers you to monitor enterprise-wide security policies in real-time, all from a single client. Providing both active and passive remediation, SecurityManager works 24x7 to ensure that critical Active Directory and File Server configurations are correctly defined, proactively reducing the risks of costly security breaches while enforcing corporate compliance at all times

## **ChangeAuditor** - Real-time auditing for Windows

ChangeAuditor gives you the power to know your Windows infrastructure with modules dedicated to comprehensive auditing of your network's most critical components -- Active Directory, Exchange and File Servers -- all from a single client. With its intelligent event consolidation and correlation capabilities, ChangeAuditor helps you to understand exactly what type of change occurred and the most critical

details about each change. This detail includes not only who made the change, but also both the previous and new values of the change. By providing real-time alerts and vital change insights, as well as both built-in and custom reports, ChangeAuditor drives security, control and compliance into even the largest and most complex Windows environments

### **RestoreADmin** - Backup Active Directory

RestoreADmin allows administrators to **perform easy online restorations of deleted objects**, associated attributes, security descriptors, passwords and group memberships, saving valuable time and reducing the risk of outages by eliminating time-consuming scripts and manual processes. Plus, when used in conjunction with ChangeAuditor, NetPro's auditing and configuration solution, it gives you immediate notification of deleted objects. And RestoreADmin also enables administrators to **create and schedule centralized backups of supported Active Directory objects**, driving user productivity and reducing user downtime. Learn more about restoring Active Directory online and scheduling backups.

### **GPOADmin** - Group Policy Management

GPOADmin extends the capability of Group Policy Management Console (GPMC) by **simplifying the use and administration of Group Policy**. GPOADmin automates such critical tasks as GPO version control, auditing and comparison, GPO lock/unlock for secure editing, advanced GPO searching and reporting capabilities, and GPO backup and link restoration. Learn more about simplified GPO administration and management.

### **ReportADmin** - Active Directory Compliance Reporting

ReportADmin **centralizes and consolidates Active Directory compliance reporting**, ending reliance on manual scripts and time-consuming reporting tasks. Through tight integration with Microsoft SQL Reporting Services, ReportADmin enables automated delivery of audit and security information to management and internal auditors on pre-defined schedules to ensure compliance. Learn more about streamlined compliance and security reporting.

### **LogADmin** - Event Log Analyzer

Compliance regulations require that organization store historical log data over time. LogAdmin enables event log consolidation, analysis and storage in a controlled, scalable and secure environment, giving organizations **a cost-effective way to meet their compliance reporting requirements**. Learn more about event log consolidation, analysis and storage.

### **SelfServiceADmin - Active Directory Password Reset**

SelfServiceADmin dramatically reduces helpdesk calls, drives user productivity, and cuts costs by enabling end users to reset their own passwords and **unlock user accounts while maintaining corporate data security standards**. SelfServiceADmin also integrates auditing and activity tracking and provides immediate notification of password reset results. Learn more about end user password management.

### **MissionControl for MIIS**

By its very nature, **Microsoft Identity Integration Server (MIIS)** is both business-critical and complex. The leading Microsoft identity management platform, MIIS synchronizes data across a widely distributed environment among disparate data sources that may include everything from Lotus Notes and Oracle to Exchange and Active Directory. The combination of that complexity and business-critical status adds up to one thing - the need for strategic, proactive management.
